A Report Submitted to **Atmiya University** in
Partial Fulfilments of the Requirements for the **Concept to Practice**.

Faculty of Science
Department of Computer Science
Academic Year (2024-27)

This is to certify that Concept to Practice (C to P) work embodied report titled **"Synergy Superspeciality Hospital**" was carried out by **Group no: 08** for partial fulfilment of **C to P** to be awarded by Department of **Computer Science**, Atmiya University. This work has been carried out under my guidance and supervision and it is up to my satisfaction.

Date: 17-03-2026

Place: Rajkot

Signature and Name of Mentor/Guide **Signature and Name of H.O.D.**

Executive summary

This section provides a short and concise overview of what is contained in the C to P From 1st semester to the 4th semester. It is part of finishing school which indulge the entrepreneurial approach and thinking among our students. It is important that the executive summary hits the highlights the objectives of C to P Programme and intrigues the reader to read further. A poorly written rambling executive summary may lead the reader to form a less than positive opinion of the plan resulting in them leaving the bulk of the plan, Ideas unread, unexplored and get proper direction.

- The first is the Problem identification, where you list down the 5 major problems associated with your selected domain through the certified canvas i.e., observation caves, empathy canvas and problem identification canvas. Group has also aligned listed five problems with SDG goal which make them aware about the significant importance of SDG for their businesses. This is done during their first semester ad viva was supported by internal & external examiner.

- The second is Solution phase from one problem Identification phase, in which group has analyse possible solution through the use of brain storming, structure brain storming, Mind mapping, SCAMPER etc.

- The Third is Pre- Proto Type phase, where group has to prepare product or service of selected solution and demonstrate to the selected expert to check the suggestions for their product/services.

- The Third is Pre- Proto Type phase, where group has to prepare product or service of selected solution and demonstrate to the selected expert to check the suggestions for their product/services.

Finally, the launching of pre- proto type through feedback from internal & external stack holders for final modification &launching of Final proto type for business and also needs to submit business canvas, leaflet of Proto type and website development

It gives me a great sense of pleasure to present the report of the Concept to Practice (C to P) undertaken during the Program **BCA** semester **04**.

We would like to express our profound gratitude to **Dr. Divyesh Gohel** of **Department of computer science** and **Dr. Ravi Tank** Dean of Atmiya university for their contributions to the completion of my project titled "**Synergy Superspeciality Hospital."**

We would like to express our special thanks to our mentor **Ms. Janvi Rathod** for her time and efforts she provided throughout the year. Your useful advice and suggestions were really helpful to me during the project's completion. In this aspect, we are eternally grateful to you.

We would like to acknowledge that this project was completed entirely by our group and not by someone else.

Group no.: **08**

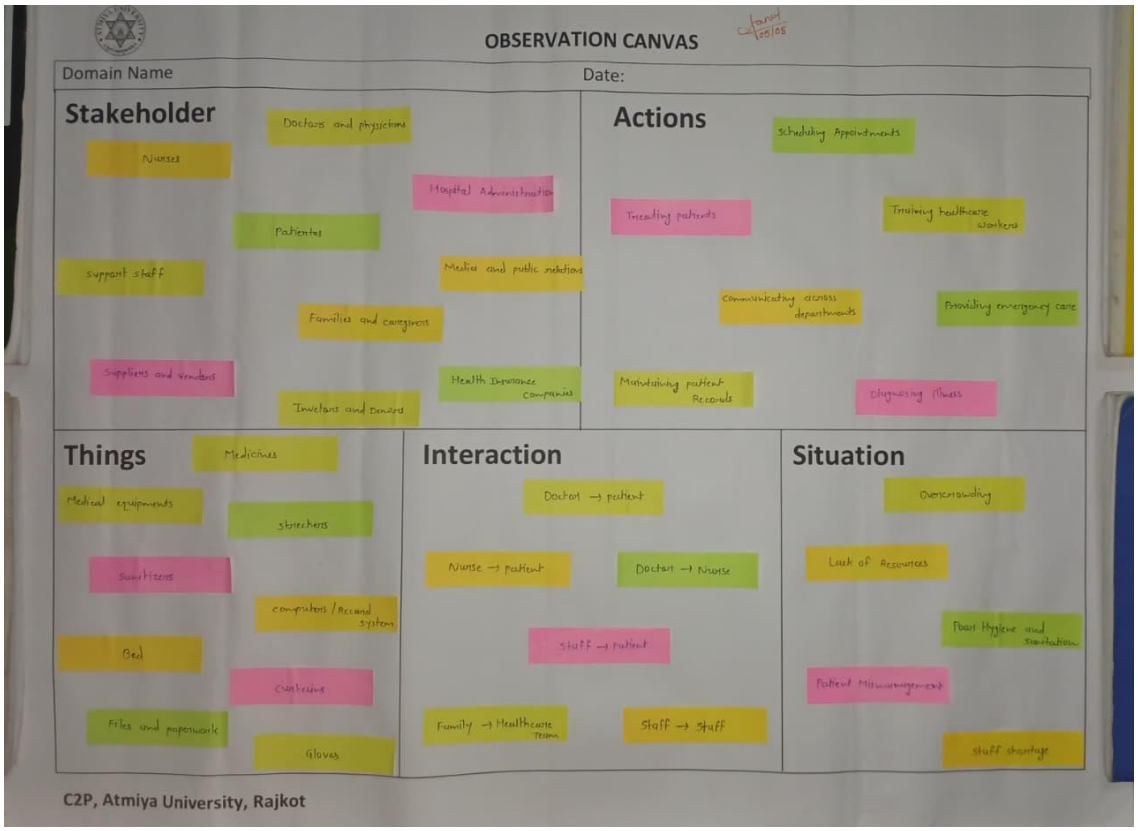
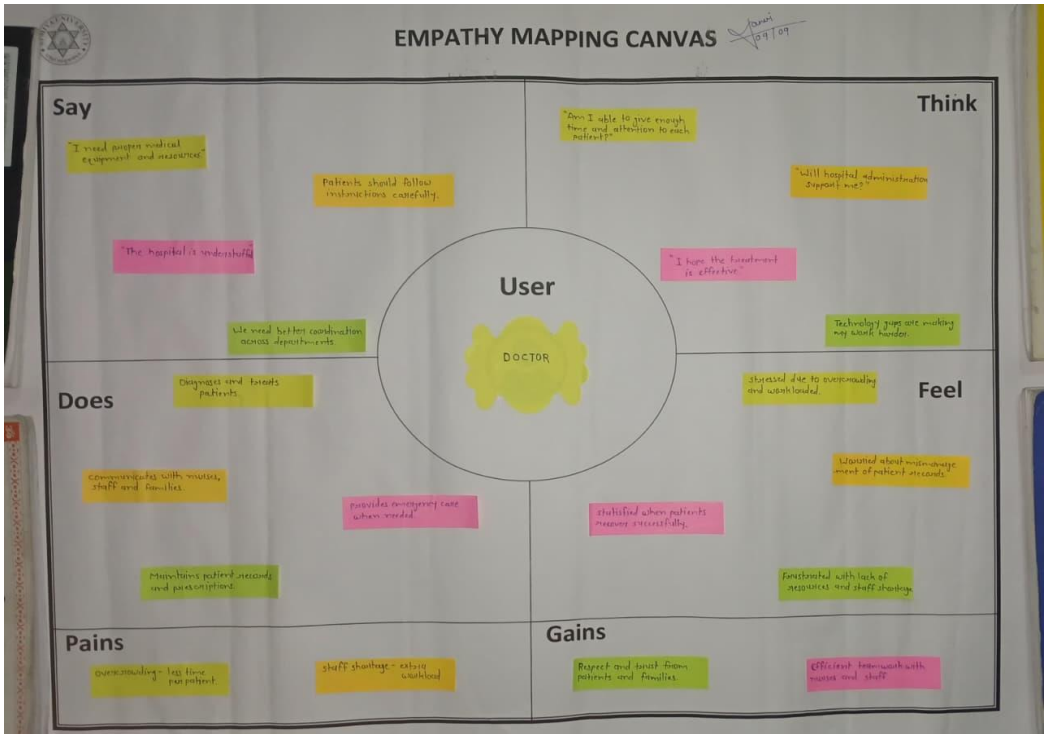
OBSERVATION CANVAS



- **Description:**

The observation canvas helps in understanding the hospital healthcare environment by identifying important elements of the system. It highlights the key stakeholders such as doctors, nurses, patients, hospital administration, support staff, families, and suppliers. These stakeholders work together to provide healthcare services. The actions observed include scheduling appointments, diagnosing illnesses, treating patients, maintaining patient records, and providing emergency care. The system also uses various resources like medicines, medical equipment, beds, computers, files, sanitizers, and gloves. Different interactions take place between doctors, nurses, patients, staff, and families. These interactions are important for proper communication and patient care. The canvas also shows challenges such as overcrowding, lack of resources, and staff shortages. It helps in identifying problems and understanding how the hospital system can be improved.

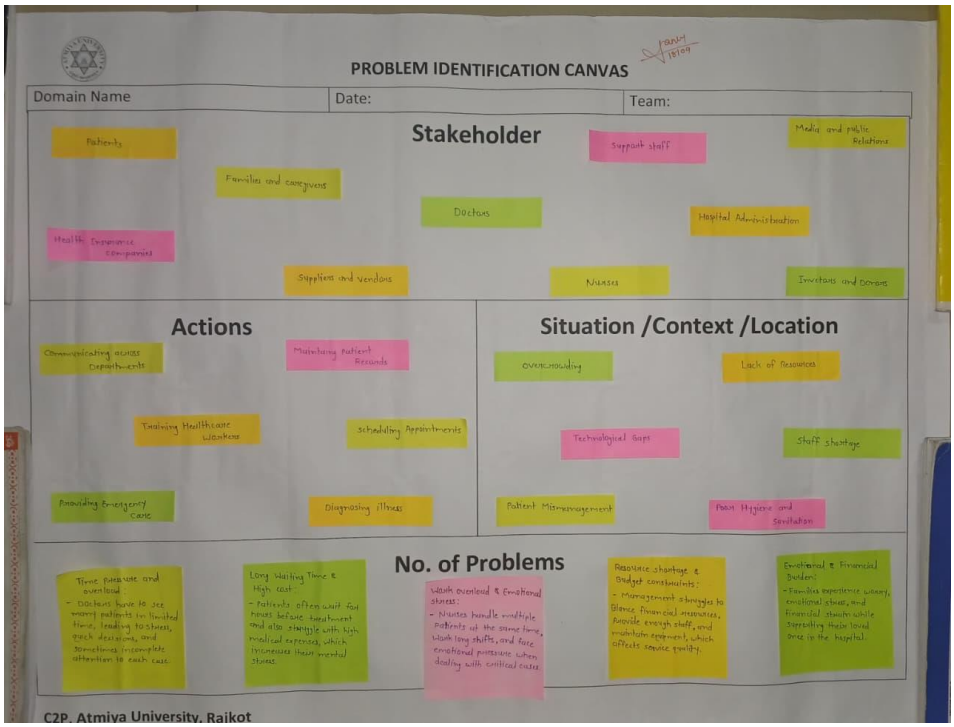
EMPATHY MAPPING CANVAS



- **Description:**

The empathy mapping canvas focuses on understanding the experiences and perspectives of a doctor in the hospital environment. It highlights what the doctor says, thinks, does, and feels while providing healthcare services. Doctors express the need for proper medical equipment, adequate resources, and better coordination across departments. They think about giving enough attention to each patient and whether the hospital administration supports their work. Their daily activities include diagnosing and treating patients, maintaining records, providing emergency care, and communicating with nurses, staff, and families. Doctors often feel stressed due to overcrowding and heavy workloads. They may also feel worried about mismanagement of patient records and lack of resources. Major challenges include staff shortages and limited time for each patient. Despite these difficulties, doctors gain respect and trust from patients and families. Efficient teamwork with nurses and staff also helps improve patient care and hospital functioning.

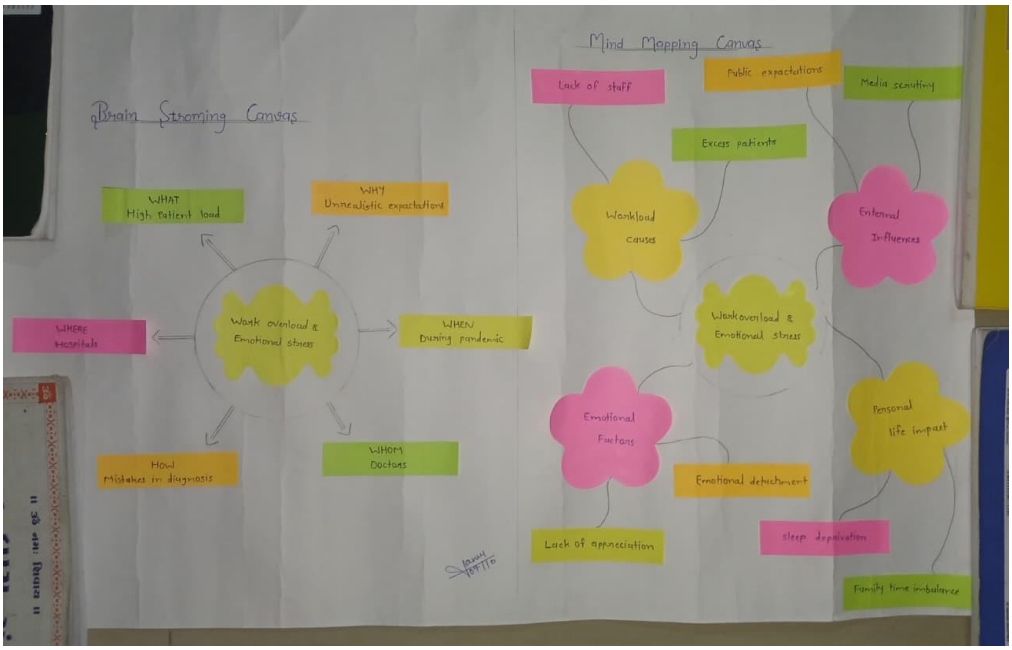
PROBLEM INDETIFICATION CANVAS



- **Description:**

The problem identification canvas helps analyze the major issues present in the hospital healthcare system. It identifies key stakeholders such as patients, doctors, nurses, hospital administration, support staff, families, suppliers, and insurance companies. These stakeholders are involved in various actions including diagnosing illnesses, scheduling appointments, maintaining patient records, providing emergency care, and communicating across departments. The canvas also highlights the situations and contexts affecting hospital operations, such as overcrowding, lack of resources, staff shortages, technological gaps, and poor hygiene and sanitation. These challenges create difficulties in providing efficient healthcare services. One major problem identified is time pressure on doctors due to a high number of patients. Patients also face long waiting times and high medical costs. Additionally, resource shortages and budget constraints affect hospital management and service quality. Overall, the canvas helps clearly identify the key problems that impact the efficiency of the healthcare system.

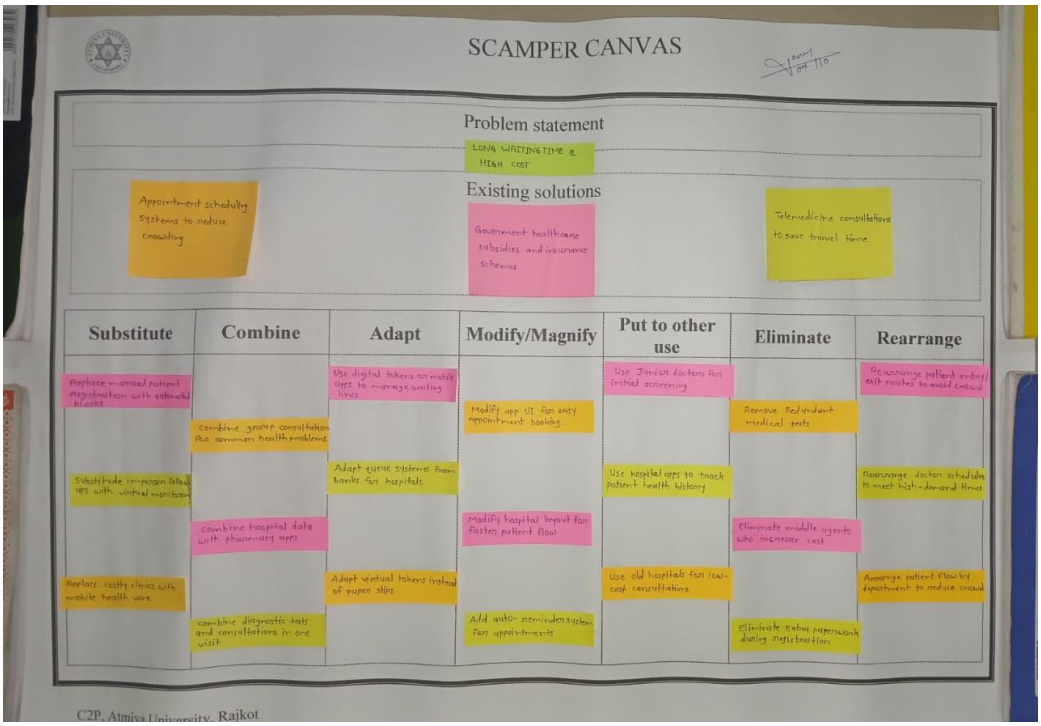
MIND MAPPING AND BRAINSTROMING CANVAS



- **Description:**

The mind mapping and brainstorming canvases provide a detailed analysis of workload and emotional stress within the healthcare system, particularly focusing on doctors during pandemic-like scenarios. The "Brain Storming Canvas" identifies key drivers such as high patient loads and unrealistic expectations, which lead to critical issues like diagnostic mistakes. Complementing this, the "Mind Mapping Canvas" categorizes the root causes into workload factors, emotional factors, and external influences like media scrutiny and public expectations. These pressures result in significant personal consequences, including sleep deprivation, emotional detachment, and family time imbalance. By mapping these connections, the canvas highlights how staff shortages and lack of appreciation contribute to a cycle of burnout. Ultimately, the visual data emphasizes that systemic "excess patients" degrade both the quality of medical care and the personal well-being of healthcare providers.

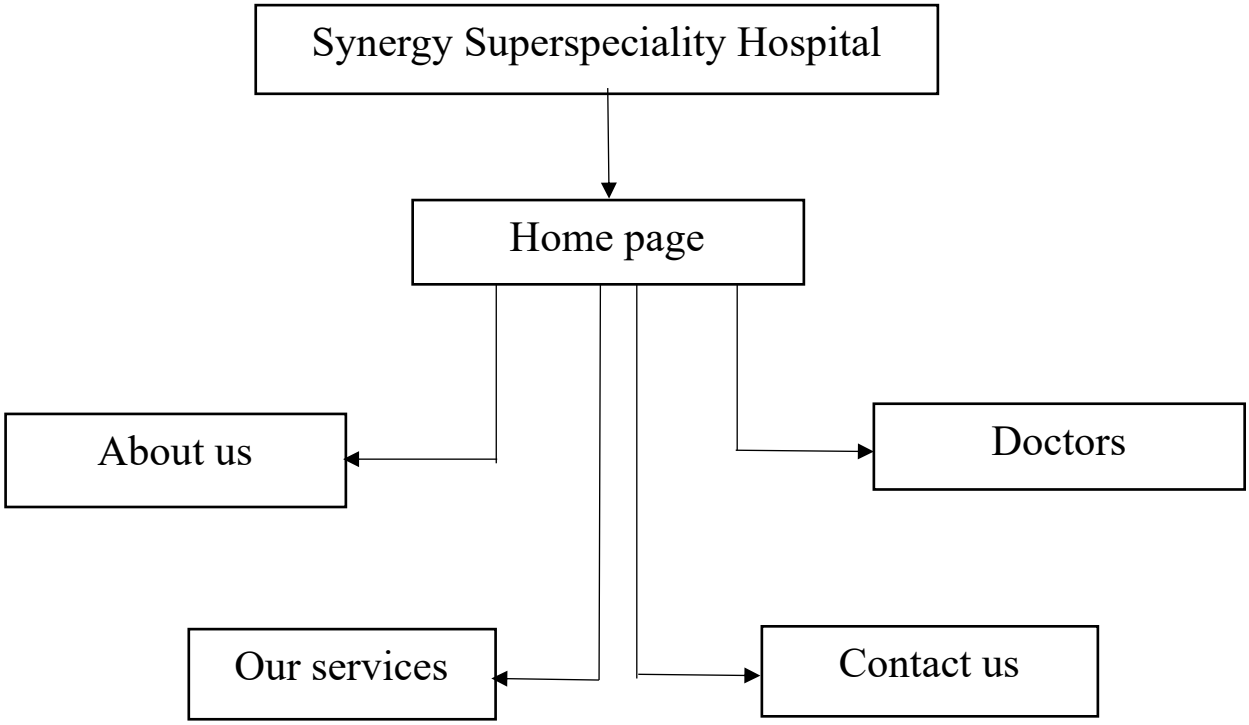
SCAMPER CANVAS



- **Description:**

The scamper canvas provides a strategic framework to address the dual problem of long waiting times and high costs in the healthcare system. It begins by evaluating existing solutions, such as telemedicine and government subsidies, before diving into innovative improvements across seven categories. The canvas suggests substituting manual registration with automated kiosks and combining diagnostic tests with consultations into a single visit to improve efficiency. It also proposes adapting banking queue systems for hospital use and modifying hospital layouts to ensure faster patient flow. To maximize resources, the plan suggests putting junior doctors to other use for initial screenings and eliminating redundant medical tests and middle agents who drive up costs. Finally, rearranging doctor schedules and patient entry routes is highlighted as a way to manage high-demand periods and reduce crowding. Overall, this structured approach aims to streamline operations and make healthcare more accessible and affordable for patients.

ROUGH PROTOTYPE



- **Description:**

This rough prototype for the **Synergy Superspeciality Hospital website** illustrates a clear, hierarchical site map designed for easy user navigation. At the top of the structure is the hospital identity, which flows directly into the **Home page**, acting as the central hub for all interactions. From the homepage, the architecture branches out into five primary sections**: About Us, Our Services**, **Doctors, and Contact Us**. The use of bidirectional arrows indicates a navigation model that allows users to move seamlessly from the home screen to specific departments and back again. This layout ensures that critical patient information, such as medical services and doctor profiles, is only one click away. By organizing the content into these distinct boxes, the prototype establishes a logical flow that prioritizes accessibility for patients seeking care. Overall, the diagram serves as a functional blueprint for a streamlined and professional healthcare web presence.

FINAL PROTOTYPE

Synergy Superspeciality Hospital

The **Synergy Superspeciality Hospital** website prototype features a clean, professional header that highlights NABH accreditation and 24x7 emergency contact details. A bright blue navigation bar provides direct links to the **Home, About Us, Our Services, Doctors, and Contact Us** sections for easy user access. The main banner uses a high-quality image of a medical professional, creating an atmosphere of trust and modern healthcare. Centered in the layout is the impactful slogan, "When you can't take a second chance, let your first option be the best," emphasizing the hospital's commitment to quality care. Overall, the design focuses on scan ability and professional credibility to serve patients effectively.

Home page

This Homepage introduces Synergy Superspeciality Hospital, Rajkot, establishing its reputation as one of the largest healthcare facilities in the Saurashtra and Kutch region. The design features a calming blue banner with introductory text, paired with a clean, professional image of a doctor to instil confidence in visitors. The central slogan, "**Your Journey to Good Health STARTS HERE**," serves as a welcoming call to action for patients. This layout effectively combines a sense of regional leadership with a personal commitment to patient wellness.

ABOUT US

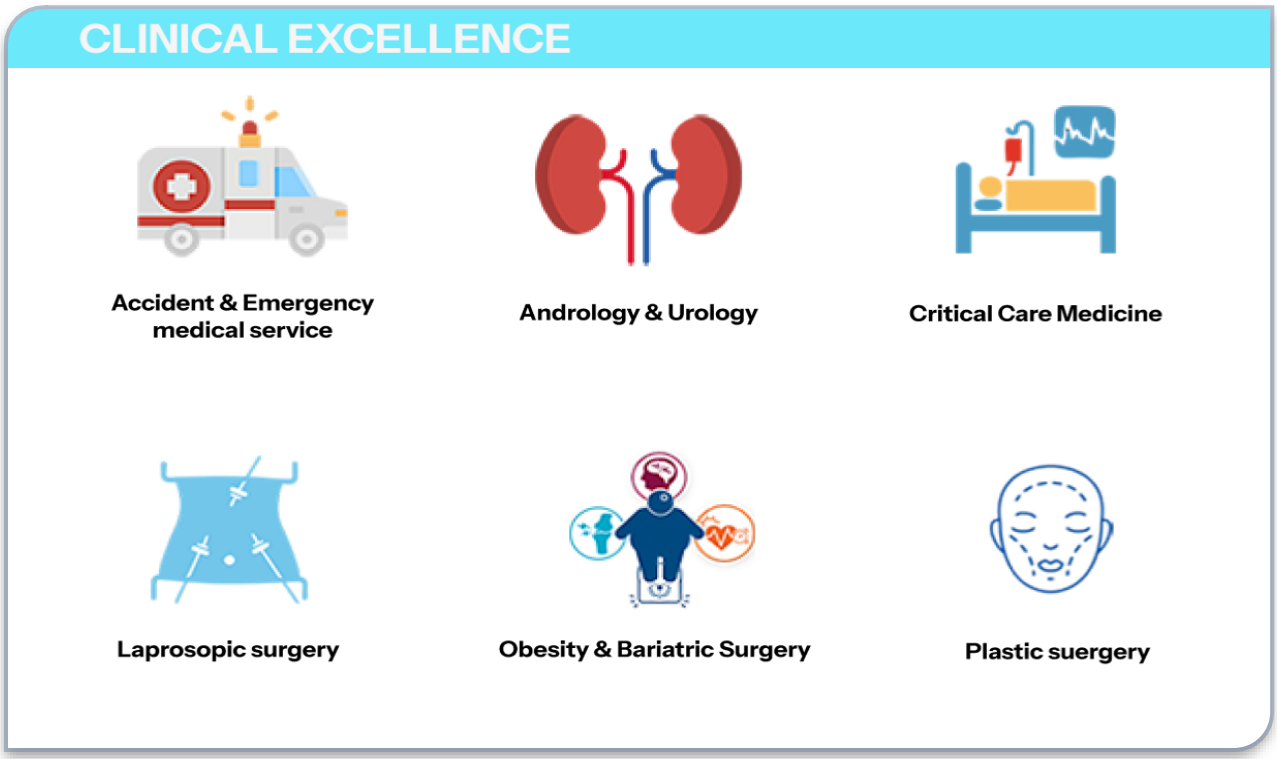
Synergy Superspeciality Hospital is a trusted healthcare institution dedicated to providing high-quality, compassionate, and patient-centered medical care. Our goal is to improve the health and well-being of our community by delivering safe, ethical, and affordable healthcare services using modern medical technology and experienced professionals.
Since our establishment in 2018, we have been committed to excellence in clinical care, patient safety, and medical innovation. We believe that every patient deserves respect, dignity, and personalized treatment in a comfortable and supportive environment.

WHY CHOOSE US?

- Experienced and compassionate medical professionals
- Modern facilities and advanced technology
- Patient-first approach
- Affordable and transparent healthcare services
- 24/7 emergency and critical care

About Us

The **About Us** page provides a comprehensive overview of Synergy Superspeciality Hospital's mission and core values. It defines the institution as a trusted healthcare provider established in 2018, committed to delivering safe, ethical, and affordable medical services through modern technology and experienced professionals. The narrative emphasizes a patient- centered approach, highlighting the hospital's dedication to treating every individual with respect and dignity. Additionally, the "**Why Choose Us?**" section uses a concise bulleted list to showcase key strengths, such as 24/7 emergency care, advanced facilities, and transparent healthcare services. Overall, this page is designed to build trust and reassure patients of the hospital's clinical excellence and community-focused goals.



Our Services

This is the **Our services** as **Clinical Excellence** section of the website highlights the specialized medical departments available at Synergy Superspeciality Hospital. It uses a clean, grid-based layout with descriptive icons to help patients quickly identify specific services, such as Accident & Emergency, Urology, and Critical Care. The inclusion of advanced specialties like Laparoscopic surgery and Bariatric surgery emphasizes the hospital's technical expertise and modern approach to treatment. By pairing visual symbols with clear labels, the design ensures high scan ability and ease of navigation for users seeking targeted healthcare. This professional presentation reinforces the hospital's image as a comprehensive, multi-disciplinary medical institution.

Doctors

The **Doctors** section of the website serves as a professional directory featuring the hospital's highly qualified medical team. Each profile displays the doctor's name, advanced degrees, and specialized fields—such as Cardiology, Neurology, and Orthopaedics—with a notable emphasis on "Gold Medallist" credentials to build patient trust. To enhance user experience, every listing includes a clear **"Book Appointment"** call-to-action, streamlining the process of seeking care. This organized layout effectively showcases the hospital's clinical expertise while providing a direct and efficient path for patients to connect with specialists.

GET IN TOUCH

Address

Ayodhya Chowk, Opposite Gokul Mathura Apartment, 150 feet ring road, Rajkot - 360005, Gujarat - INDIA

Contact Number

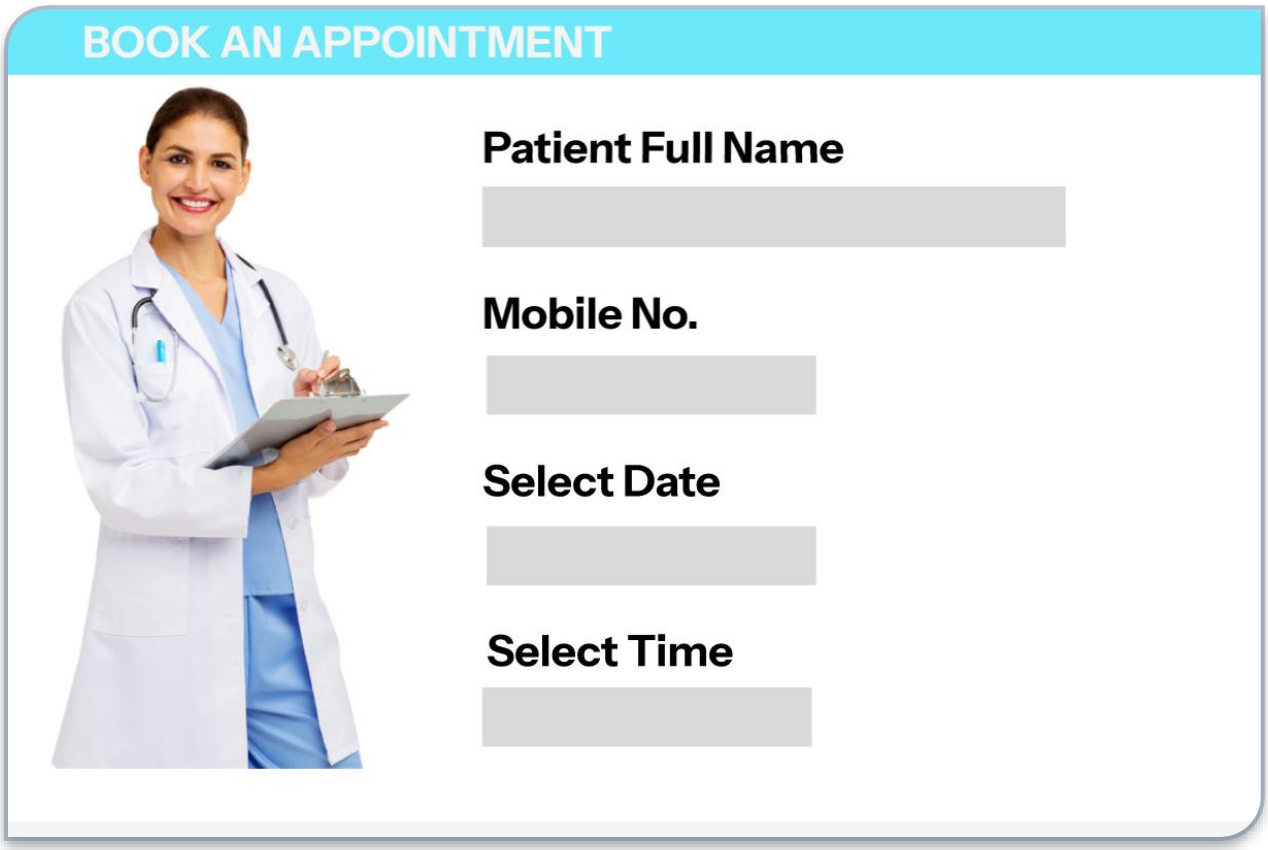
Helpline : 0281 6195000 / +91 95121 40059
Emergency : 0281 6195050 / +91 95121 40058

Send Us Mail

enquiry@synergyhospital.co.in

Contact Us

The **Get in Touch** section serves as the final point of contact, providing essential accessibility information for patients and visitors. It is clearly divided into three functional categories: a physical **Address** in Rajkot for navigation, multiple **Contact Numbers** for both general helplines and urgent emergencies, and a professional **email** for formal inquiries. The use of bold blue headings against a clean white background ensures high readability, allowing users to find critical communication details in seconds. By providing dedicated emergency lines, this layout reinforces the hospital's 24/7 commitment to patient care and responsiveness.



Book An Appointment

The **Book an Appointment** section provides a user-friendly digital interface designed to simplify the patient registration process. It features a clean, professional layout with a friendly medical professional's image to reassure users, alongside essential input fields for the patient's full name, mobile number, and preferred date and time. By automating the scheduling process, this form reduces the need for manual paperwork and minimizes waiting times at the hospital. This streamlined approach enhances the overall patient experience by making healthcare services more accessible and organized.

3-FOLD LEAFLET

Why Choose Us?

- Experienced and compassionate medical professionals
- Patient-first approach
- Modern facilities and advanced technology
- Affordable and transparent healthcare services
- 24/7 emergency and critical care

Services

- Advanced Clinical Diagnostics
- Heart & Vascular Institute
- Accident & Emergency service

WHY YOU CAN'T TAKE SECOND CHANCE LET YOUR FIRST OPINION BE THE BEST!

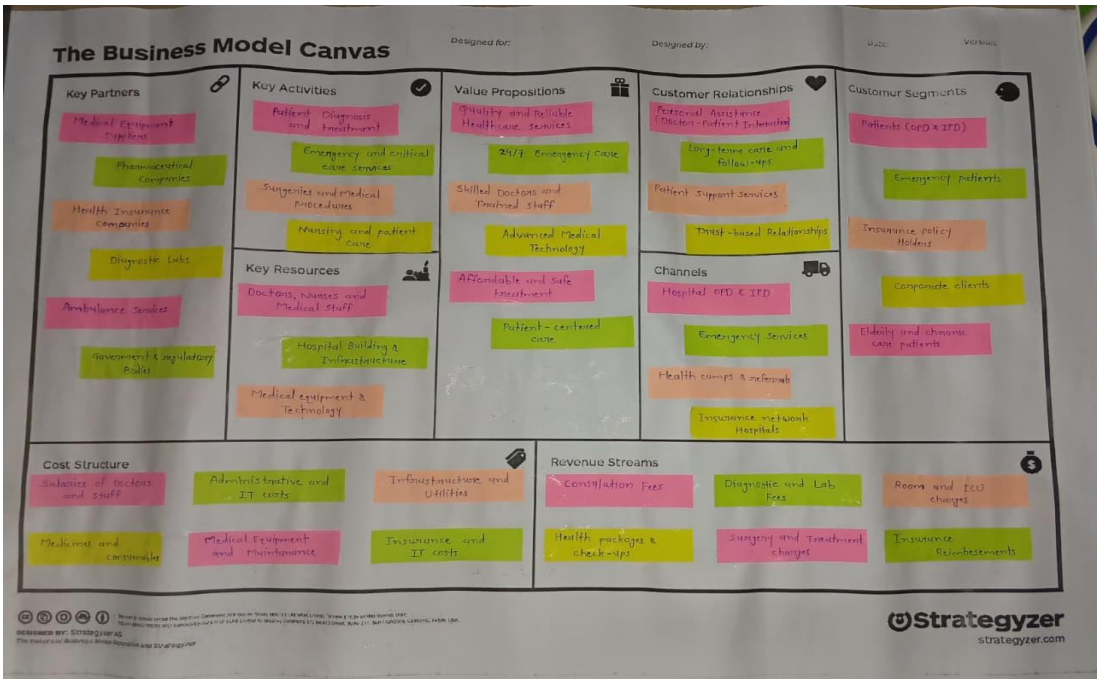
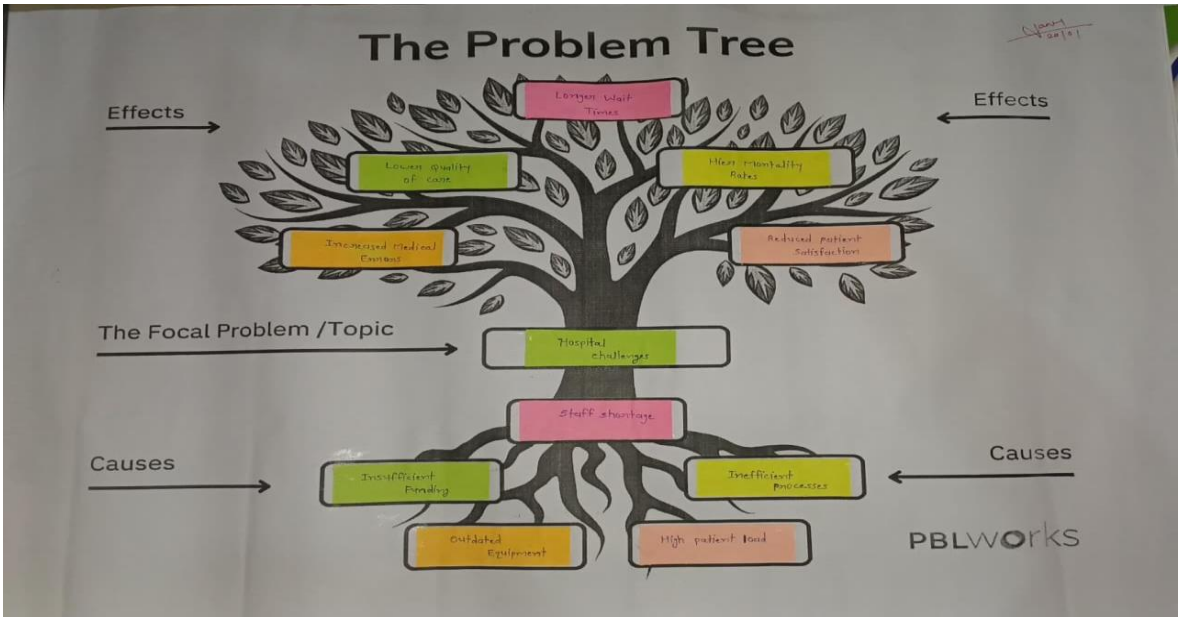
THE BUSINESS MODEL CANVAS



- **Description:**

The **Business Model Canvas** outlines a strategic roadmap for the hospital's operations and financial sustainability. It focuses on delivering Value Propositions like 24/7 emergency care and advanced medical technology to diverse Customer Segments, including OPD/IPD patients and insurance holders. Key Activities such as patient diagnosis and surgeries are supported by Key Partners like pharmaceutical companies and diagnostic labs. The model emphasizes Customer Relationships built on personal assistance and trust. Financially, it balances a Cost Structure of staff salaries and equipment maintenance against Revenue Streams from consultation fees and insurance reimbursements. This framework ensures a patient-centered approach while maintaining operational efficiency.

THE PROBLEM TREE CANVAS



- **Description:**

The **Problem Tree** diagram provides a visual analysis of the root causes and resulting consequences of "Hospital Challenges." The roots of the tree represent the underlying causes, such as insufficient funding, outdated equipment, high patient loads, and inefficient processes, which ultimately lead to a critical staff shortage. These foundational issues manifest as the focal problem of systemic hospital instability. The branches and leaves illustrate the negative effects, including longer wait times, lower quality of care, increased medical errors, and higher mortality rates. Together, these factors culminate in significantly reduced patient satisfaction. This structured overview helps identify that solving hospital challenges requires addressing the "roots," like funding and equipment, to improve the "outcomes" for patients.
